Projects

- **Financial dashboard:** Responsive financial dashboard created using React, Bootstrap & ChartJS. The stock screener employs the use of multiple financial APIs in order to create a fully functional financial tool. Pricing information, graphs, relevant news, and financial ratios are rendered dynamically as needed by user. Challenges included caching and persisting API data, asynchronous querying, and the implementation of a trie data structure for autocompleting ticker suggestions.
- **Small business websites:** Delivered a few small business websites built from scratch using vanilla JS, HTML, CSS, and bootstrap. Websites include a baked goods website and concrete construction website. Both were delivered on time and within budget.
- **Portfolio:** Responsive portfolio website built using React, Bootstrap, and a handful of React libraries. The portfolio site is a single page with two themes. This presented certain obstacles in terms of properly rendering components and their styles. Additionally, the interactions of various React libraries lead to persistent and unforeseen bugs. Thus, state and lifecycle management proved more finicky than anticipated.
- **Music blog:** Static music blog written with JS, HTML, CSS and bootstrap. Completely responsive with a minimal design. Interactive header displays randomized characters and resets after set amount of time.
